

NOTICE OF UPCOMING VEGETATION MANAGEMENT WORK

To the Local Municipality,

Public Service Electric and Gas Company (PSE&G) maintains one or more electric transmission right-of-way(s) through your municipality. The electric transmission lines on PSE&G right-of-way are essential for PSE&G to meet its commitment to provide safe, reliable and efficient electric service to consumers throughout New Jersey. Maintaining the vegetation along these transmission lines for proper tree clearance is absolutely necessary to assure:

- The continued safety of homeowners living near the transmission lines.
- The safety of PSE&G employees and contractors working on the power lines.
- The reliability of the electric utility system.

Maintenance of vegetation on right-of-way in your municipality is required at this time; please see the attached map(s). A list of the nearest cross streets has also been provided. After acquiring property owner consent, private contractors working for PSE&G, will **BE SELECTIVELY APPLYING HERBICIDE TO INCOMPATIBLE BRUSH** within the electric transmission right-of-way easement. The contractor and applicators are properly licensed and trained in use of herbicides on utility ROWs and will follow all applicable regulations; only herbicides labeled and approved by both Federal and State regulatory agencies for use on utility ROWs will be used. This work will begin on/after June 15, 2017 and will continue through September, 2017. A contractor representative will also notify your municipality and the effected property owners in your community of more specific dates for when crews will be working in your area.

If you have any questions or concerns, please telephone Public Service Electric & Gas Transmission Vegetation Management Department at 732-289-5292.

Thank you,

Richard Arnold
PSE&G Vegetation Manager - Transmission
